

1.) Narrating Screen Reader

Tested on: Canvas

Pros:

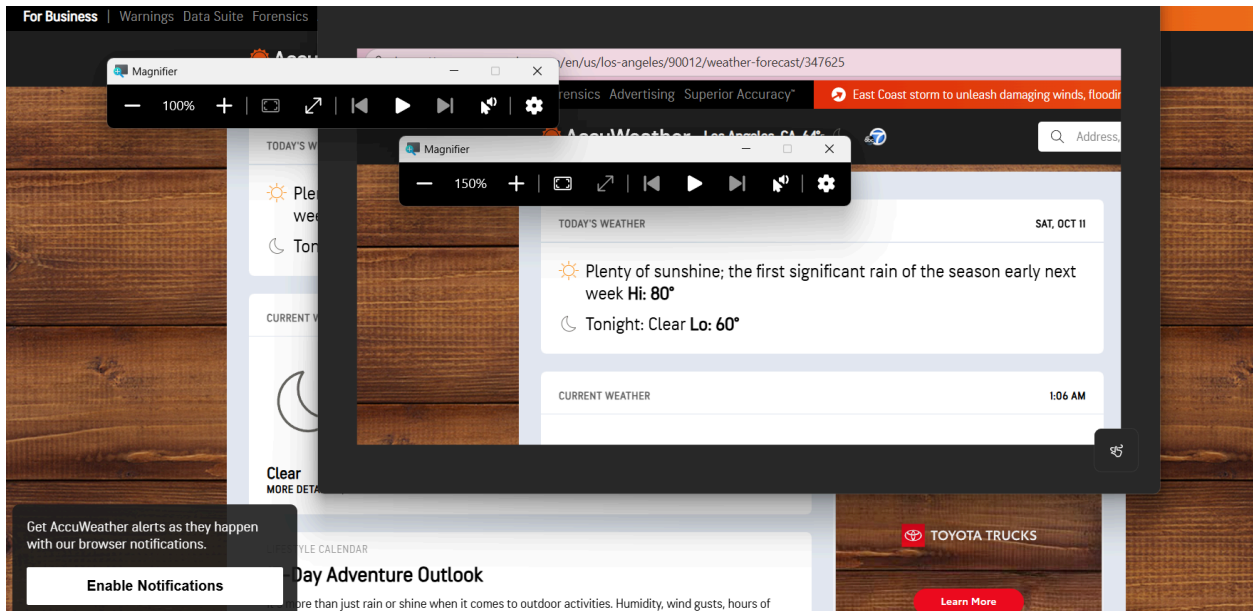

- Reads the page content clearly
- While reading, it highlights whatever word is being spoken
- Able to use buttons and navigate through forms effectively
- Able to control voices and speed of narration

Cons:

- When nothing is clicked it sometimes says "New Line"
- Confusing if pop ups appear
- Some words or phrases are not read correctly

2.) Zoom/Magnifier Tool

Tested on: Weather website

Pros:

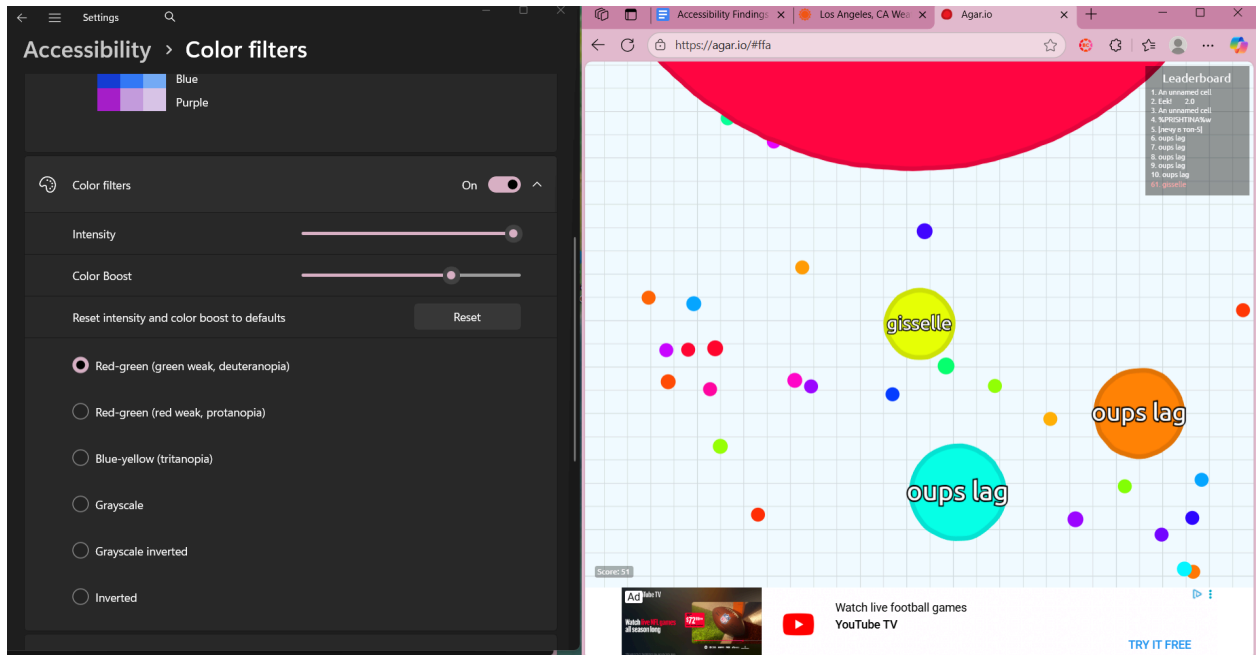

- The toolbar made it easier to zoom in and out whenever I wanted to
- Makes text easier to read

Cons:

- Zooming in causes the pixels to appear more blurred
- Harder to execute some tasks while zoomed (such as taking screenshots, closing popups, navigating to other tabs)

3.) Contrast & Color Tools

Tested on Agario

I took screenshots of different color filters however it does not show on the screenshot

Pros:

- High contrast color filters can improve readability as well as help to distinguish between elements on the screen.
- May lead to a reduction of eye strain

Cons:

- Some color filters make objects unclear and harder to distinguish from each other.
